

NASA All Stars and Earth Observer Satellites

Oz* - An AI mission and refueling robot. He represents the best ideas from NASA's Satellite Services Project Division.

Connie - Landsat 8 Continuity Mission, who as matriarch of the Landsat family of satellites leads the Earth observation team.

Old Man Hubble – Eyes on the heavens, heart on the ground. The Hubble Space Telescope opens up a new age for space based telescopes.

Bolt – AVHRR weatherman and fastest satellite in the sky. Proud of his island roots and love of the Caribbean.

Izzy* – Robot caretaker for the International Space Station Cafe. She runs a tight ship with her robo-cube assistants to repair and serve all satellites.

Lily – Working 24/7 to keep the lines open, this busy, busy-body telecommunications operator listens in and learns from conversations.

Calipso – An atmospheric sounding satellite, who loves the Caribbean and who sees through the clouds with lidar, while he leads the A-Train.

Debri* – Space wrangler and pollution fighter. She is a composite of advanced projects being tested and deployed to capture space junk debris.

Cubesats - Small satellites that optimize miniaturization technology

Plus cast of **NASA's** satellites, featuring the A-Train Constellation and many more!

*Fictionalized NASA satellite prototype.
